

Features

- Reverse Voltage up to 3000 Volts
- 25 Ampere Current Rating
- Designed for HF, Multi-Throw Kilowatt Switches
- Low Loss, Low Distortion
- Rugged, Hermetically Sealed Packaging
- Convenient Solder Lug Attachment
- Non Magnetic to 3 Tesla for MRI Applications
- RoHS Compliant

Description

The KILOVOLT™ PIN diode series utilize modern semiconductor and packaging technology that assures low loss, low distortion, and reliable performance in multi-kilowatt switch applications at frequencies as low as 1 MHz. The PIN chips employed have low resistance, high power dissipation and very high stand-off voltage capability. KILOVOLT™ PIN diodes employ ultra high resistivity, long carrier lifetime, float zone material onto which P+ and N+ regions are deposited using an epitaxial process designed MACOM for high voltage PIN diodes. This process results in better preservation of the carrier lifetime and superior layer to layer interface when compared to a conventional double diffused process. The processing of the I-region width is tightly controlled using modern lapping techniques. KILOVOLT™ PIN diode chips utilize MACOMs' proprietary Cermachip™ glass passivation. The hard glass covers all exposed junction and intrinsic surfaces. This results in a hermetically sealed, passivated chip that has been used in many high reliability military and commercial programs.

Applications

The KILOVOLT™ PIN diode series is designed for use as high power switching elements in multi-kilowatt HF and VHF applications. These PIN diodes have been extensively characterized for their electrical and thermal properties to assure predictable, low loss, high power handling and low distortion performance. Some typical applications are as follows:

- Filter Switches
- Antenna Couplers
- Power Amplifier By-pass Switches
- MRI Switches

Package Outlines

Packaging

The metal-ceramic packages were developed specifically for the KILOVOLT™ PIN diode series. The packages are designed to withstand extremely high voltages and currents. The packages meet the environmental requirements of MIL-STD-202 and MIL-STD750. The PIN diode chip is bonded to the package and the anode strap is bonded to the chip at temperatures exceeding 300°C. The anode strap has a unique, large cross-sectional area allowing for high current carrying capability. The packages are sealed using a projection welding technique in an inert environment. KILOVOLT™ PIN diodes are available with a solder lug on the anode electrode to allow for a convenient and reliable wrap-around wire connection.

Handling Procedures

Please observe the following precautions to avoid damage:

Static Sensitivity

These electronic devices are sensitive to electrostatic discharge (ESD) and can be damaged by static electricity. Proper ESD control techniques should be used when handling these Class 1C, HBM devices.
